Continuation of Disposition of Claims: Claims pending in the application are 1,2,4,6,9-12,14,16,19,20,26,27,29,31,34-37,39,41,44,45,51 and 52.

#### **DETAILED ACTION**

- 1. This application has been examined.
- 2. Claims 1,2,4,6,9,10,11,12,14,16,19,20,26,27,29,31,34-37,39,41,44, 45, 51, and 52 are presented for examination.

#### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steven Tax on July 1, 2004

The application has been amended as follows:

Cancellation of claims: 3,5,7,8,13,15,17,18,28,30,32,33,38,40,42, & 43

#### Election/Restrictions

Applicant's election of Group 1 invention over the phone on June 30, 2004.

### **Drawings**

3. The Examiner contends that the drawings submitted on **10/11/2001** are acceptable for the examination proceedings.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2173

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1,2,4,6,9,10,11,12,14,16,19,20,26,27,29,31,34-37,39,41,44, 45, 51, and 52 rejected under 35 U.S.C. 102(b) as being anticipate by Wynn et al (U.S Patent Number 6,667,751), hereafter referred to as Wynn.

In regards to claim 1, Wynn states a method for highlighting recently used items in an interface, comprising:

at a time of loading an interface, identifying a recently used item in the interface (col. 6 line 19-24) [the user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory on the system disk, and are keyed to entries in the web browser's history log.]; and

presenting the recently used item before presenting the interface (col. 6 lines 26-32) [user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory].

In regards to claim 2, Wynn discloses recording items in the interface that are selected by a user (col. 6 lines 26-32) [Using a variety of prior art and new graphical user interface controls, such as sliders, spinners,

Art Unit: 2173

infinite spin lists, and rubber-banded controls, the user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory on the system disk, and are keyed to entries in the web browser's history log. In the preferred embodiment, the images are stored in cache, which allows for quicker retrieval, and are written to system non-volatile memory, such as a hard drive, prior to system shut down or when the cache is full.]

In regards to claim 4, Wynn states presenting the interface (col. 3 lines 25-27 & Figure 3 [38]) [user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory]; and highlighting the recently used item in the interface (Figure 10 & col. 8 lines 66 - col. 9 lines 20) [FIG. 10 shows a close-up view of the history viewer (1100) with a graduated slider (150) as the control. The graduation marks (154) on the slider assist the user in moving one or more views forward or backward in the history log. The

slider control may include a forward or next button (151) and

a back or previous button (152). Also, the control may have a position selector and indicator (153).

In regards to claim 6, Wynn discloses displaying the recently used item in a portion of a display concurrently with the interface (Figure 11 & col. 9 lines 20-35) [The history viewer is shown on a web browser main GUI display (31) in FIG. 11. (22) The user may move the control to a position within the history log where a desired previously visited page is displayed, and then activate a "go to" control to re-point the browser to that address, thereby retrieving a fresh copy of the page. In the preferred embodiment, this is simply done by releasing or "dropping" the slider control at the desired position, and pointing with the mouse to the displayed thumbnail, and clicking on the thumbnail. Other options to activate the "go to" control include dragging and dropping the position information display into the main web browser window, dragging and dropping the address display into the location bar, or simply double clicking on the positional control or address display.].

5. In regards to claim 9, Wynn states the interface comprises a web document (col. 6 lines 17-31).

In regards to claim 10, Wynn discloses the recently used item comprises a hyperlink (col. 9 lines 34-35) [dropping the address display into the location

Art Unit: 2173

bar, or simply double clicking on the positional control or address display].

6. In regards to claim 51, Wynn states A computer program product, in a computer readable medium, for highlighting recently used items in an interface, comprising:

instructions for identifying a recently used item in an interface at a time of loading the interface(col. 6 lines 19-32 & Figure 10) [The foregoing and other objects, features and advantages of the invention will be apparent from the following more particular description of a preferred embodiment of the invention, as illustrated in the accompanying drawings wherein like reference numbers represent like parts of the invention. A standard web browser software package is modified to include a new set of controls, page image rendering and history logging functions. The standard web browser functionality already has the capability to receive and interpret HTML and other standard web documents, and to create and sort history logs, and to automatically point to URL's and addresses contained within the history log. Using a variety of prior art and new graphical user interface controls, such as sliders, spinners, infinite spin lists, and rubber-banded controls, the user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory on the

Art Unit: 2173

system disk, and are keyed to entries in the web browser's history log. In the preferred embodiment, the images are stored in cache]; and

instructions for presenting the recently used item before presenting the interface(col. 6 lines 26-32 & Figure 10) [Using a variety of prior art and new graphical user interface controls, such as sliders, spinners, infinite spin lists, and rubber-banded controls, the user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory on the system disk, and are keyed to entries in the web browser's history log. In the preferred embodiment, the images are stored in cache, which allows for quicker retrieval, and are written to system non-volatile memory, such as a hard drive, prior to system shut down or when the cache is full.].

7. In regards to claim 52, Wynn discloses A computer program product, in a computer readable medium, for highlighting frequently used items in an interface, comprising:

instructions for identifying at least one frequently used item in an interface at a time of loading the interface (col. 6 lines 19-32 & Figure 10) [The foregoing and other objects, features and advantages of the invention will be

Art Unit: 2173

apparent from the following more particular description of a preferred embodiment of the invention, as illustrated in the accompanying drawings wherein like reference numbers represent like parts of the invention. A standard web browser software package is modified to include a new set of controls, page image rendering and history logging functions. The standard web browser functionality already has the capability to receive and interpret HTML and other standard web documents, and to create and sort history logs, and to automatically point to URL's and addresses contained within the history log. Using a variety of prior art and new graphical user interface controls, such as sliders, spinners, infinite spin lists, and rubber-banded controls, the user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory on the system disk, and are keyed to entries in the web browser's history log. In the preferred embodiment, the images are stored in cache]; and

instructions for presenting the frequently used item 5 before presenting the interface (col. 6 lines 26-32 & Figure 10) [Using a variety of prior art and new graphical user interface controls, such as sliders, spinners, infinite spin-lists, and rubber-banded controls, the

Art Unit: 2173

user is allowed to visually review previous browsing sessions and browsing history. As web sites are visited during a normal browsing session, images of the pages viewed are rendered and stored in the system's memory on the system disk, and are keyed to entries in the web browser's history log. In the preferred embodiment, the images are stored in cache, which allows for quicker retrieval, and are written to system non-volatile memory, such as a hard drive, prior to system shut down or when the cache is full.].

- 8. Claims 11, 26, 36 are substantially equivalent to claim 1, therefore claims 11, 26, 36 are rejected because of similar rationale.
- 9. Claims 12, 27, 37 are substantially equivalent to claim 1, therefore claims 12, 27, 37 are rejected because of similar rationale.
- 10. Claims 14, 29, 39 are substantially equivalent to claim 1, therefore claims 14, 29, 39 are rejected because of similar rationale.
- 11. Claims 16, 31, 41 are substantially equivalent to claim 1, therefore claims 16, 31,41 are rejected because of similar rationale.
- 12. Claims 19, 34, 44 are substantially equivalent to claim 1, therefore claims 19, 34, 44 are rejected because of similar rationale.
- 13. Claims 20, 35, 45 are substantially equivalent to claim 1, therefore claims 20, 35, 45 are rejected because of similar rationale.

Art Unit: 2173

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to O'Neal R Mistry whose telephone number is (703) 305-2738. The examiner can normally be reached on 9am - 6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W Cabeca can be reached on (703)308-3116. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
